

The Automated Dispensing Unit (ADU-3500) automates the dispensing, product labeling and verification of a variety of products—including pre-packaged products, nutraceuticals, supplements and pharmaceutical units-of-use. The easy-load cartridge system uses bar code verification to automate the dispensing process previously done manually by clerks, technicians and pharmacists. This low-cost unit has a small footprint and provides a superior alternative to current A-Frame Technology. It requires minimum integration and provides maximum flexibility for nutraceutical, supplement and pharmaceutical mail order distribution centers.
